Information Disclosure Statement

The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609.04(a) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

> A person shall be entitled to a patent unless –
>
> (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 3, 4 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Kramer. Kramer teaches a compact disk box (4; Fig. 1) including a first portion with a back (6), first and second walls (see Fig. 4), front (5) and bottom (see Fig. 4) walls, and a cover (see column 2, lines 50-52) and a storage device including top (12) and bottom (25) portions, first and second side walls (14,16), and a front opening (see Fig. 2). The cover of the disk box is removable before it is inserted/slid into the storage device (see column 2, lines 50-52). The box includes a horizontally oriented support with a vertically edge (6; top and

front side wall) and the device includes a latching finger (22'24'). The displaceable latch finger would inherently allow a compact disk box with its cover closed to be slidably inserted in and removed from the device and would allow a compact disk box without its cover to be slidable inserted into the box but prevents it from being removed there from.

Allowable Subject Matter

Claims 1, 2 and 5 are allowed. The prior art fails to teach a compact disk storage device having a coiled/flat spring biasing the disk box inserted inside the device. One side of the spring is attached to the device and the other end has two operative positions, a first coiled operative position and a second distended operative position.
